

Surface Mounting and Hanging Instructions for Metalscape Signs and Artwork.

Thank you for purchasing a unique Metalscape product.

When mounting your Metalscape sign or artwork to any surface, we highly recommend the following:

1. Use solid brass or high quality stainless steel (minimum grade 304) screws, bolts and nuts or 'D' shackles for attachment.
2. Allow a space between the mounting surface and artwork to provide an air gap to prevent moisture build up and corrosion between surfaces. The use of plastic or good quality rubber spacers is recommended between all surfaces to prevent possible corrosion.
3. If supplied with your sign or artwork, please fit plastic screw holders and caps to hide screws or bolt heads, for a professional finish.
4. For hanging signs, use stainless steel 'D' shackles (grade 316) normally supplied by Metalscape, ensuring that the plastic or rubber washers (also supplied) are used as spacers between surfaces.
5. To maintain and preserve your product in good condition, we recommend the regular use of WD40 or Inox, to clean the surface, and to prevent corrosion over time.

Thanks and regards,

Gavin and Naona Stewart.
